

What's new in Purge-it! Version 5

Custom Module

Version 5.0 has seen a fundamental rewrite of the Purge-it! Custom Module interface. By focusing on a Powerform and Dashboard approach, this latest release delivers a superior user experience that is easy to navigate but delivers powerful results.

1. Custom Module Dashboard (New!)

A completely new addition for Version 5, the Customer Module Dashboard brings all the benefits users are familiar with from the session dashboards but with even greater functionality.

Screen shot: Custom Module Dashboard (New!)

The screenshot displays the 'Purge-IT Custom Module Workbench' interface. At the top, there's a search bar for 'Search Schedules for a Table' and an 'Apply Filter' button. Below this, a table lists various schedules with columns for 'Schedule Name', 'Schedule Description', 'No. Of Tables', 'Join Tables?', and 'Schedule Tables'. One schedule, 'ZKZMAN0220 Inbound Equipment Management', is selected. Below the main table, there are several sub-panels: 'Schedule Tables' showing details for the selected schedule, 'Purge Table Data Selection' showing a table with columns for 'Table', 'Connection Logic', 'Selection Column', 'Selection Operand', and 'Selection Values', 'Join Tables' showing details for the selected schedule's join tables, and 'Join Table Data Selection' showing a table with columns for 'Join Table', 'Connection Logic', 'Selection Column', 'Selection Operand', and 'Selection Values'. The interface is complex and contains many data points and interactive elements.

2. Custom Module – extra selection operands (New!)

The extra selection operands provide users with far greater opportunities to dig deeper and more precisely when interrogating their JD Edwards data from within Purge-it!

The screenshot shows the 'User Defined Codes - Work With User Defined Codes' interface. At the top, there's a title bar and a toolbar with icons for search, add, delete, and other actions. Below the toolbar, there's a form with 'Product Code' set to 'YK60' and 'User Defined Codes' set to 'OP'. Below the form, there's a table with columns for 'Codes' and 'Description 01'. The table lists various codes and their descriptions, with a red dot next to each row. The codes listed are: BW (Between), EQ (Equal To), GE (Greater Than or Equal To), GT (Greater Than), IN (In List), LE (Less Than or Equal To), LK (Like), LT (Less Than), NB (Not Between), NE (Not Equal To), and NI (Not In List).

3. Custom Module Extension Pack (Significant upgrade)

The Custom Module Extension Pack enables Purge-it! to be used for archiving projects that extend far beyond the standard JD Edwards tables.

Version 5 boasts **140 pre-defined schedules that target over 400 tables**. This means Purge-it! is now equipped to address data management challenges across even more areas in JD Edwards.

4. Enhanced Dashboards

Building on the Session Dashboard concept that was first introduced in Version 4.03, Version 5 sees significant additions to the interface and a complete reorganization of the visuals.

Tabs are now used to create a much flatter user interface and to negate the time-consuming requirement to constantly switch back and forth between screens.

Screen shot: Enhanced Session Dashboard

Screen shot: Run Status tab

Each of the tabs is designed to provide insightful information on the status of the archiving activity.

For example:

- Run Status now includes a progress bar so that you can quickly see the percentage of work completed and an estimated finish time.
- Email notifications allow users to receive automated messages when an archive job is complete with the results of the job.

5. Cancellations

Warning message boxes appear on archive jobs that are cancelled immediately. Archive jobs with a pending future cancellation are highlighted on the Session Dashboard and there is also the ability to remove an active cancellation request (in other words, users can cancel a cancel!)
